Arnold Schwarzenegger, Governor
State of California

2006

Commission Members

Leslie Peterson Schwarze, Chair	School Board Member
Jon Stordahl, Vice Chair	Teacher
Catherine Banker	Public Representative
Josefina Calderon	Public Representative
Caleb Cheung	Public Representative
Paula Cordeiro	Public Representative
Margaret Gaston	Public Representative
Guillermo Gomez	Teacher
Gloria Grant	Teacher
John G. Kenney	Teacher
Leslie Littman	Designee, Office of Superintendent of Public Instruction
Aida Molina	Administrator
David Pearson	Faculty Representative
Lillian Perry	Teacher Representative
Loretta Whitson	Non-Administrative Services Credential Representative

Ex-Officio Members

Karen Gallagher	Association of Independent California Colleges and Universities
Athena Waite	Regents, University of California
Marilyn T. McGrath	California Postsecondary Education Commission
Beverly Young	California State University

Executive Officers

Dale Janssen	Interim Executive Director
Larry Birch	Director, Professional Services Division
Teri Clark	Administrator of Accreditation

The Industrial and Technology Education Teacher Subject Matter Advisory Panel

**California Commission on Teacher Credentialing
2004-2006**

Panelists	Educational Organizations
Chris Almeida	California Department of Education
Darnell Austin	California State University, Long Beach
Wally Fuller	Upper Lake Middle School
George Gridley	American River Community College
Don Maurizio	California State University, Los Angeles
Tijuana Middleton	University of California Los Angeles Extension
Michael Mitsch	Quartz Hill High School
Matt Saldana	Long Beach Unified School District
Lisa Salmonson	Florin High School
Joseph Scarcella	California State University, San Bernardino
Randolph Siercka	Birmingham High School
Robert Verdugo	Spring View Middle School
Warren Wagner	Order Processing and Requisition Accelerator, Inc.

Commission Consultants to the Advisory Panel:	Helen Hawley
California Department of Education Liaisons:	Al Tweltridge
	Richard Dahl

Industrial and Technology Education Standards of Quality and Effectiveness for Subject Matter Preparation Programs

Table of Contents

Foreword.....	vii
---------------	-----

Part 1: Introduction to Subject Matter Program Standards

A. The Commission’s Responsibilities for Program Standards.....	1
1. Overview of Standards for Preliminary Teacher Preparation Programs	1
2. Standards for Subject Matter Preparation for Prospective Teachers	2
3. The Standards Development Process.....	2
a. Essential Reference Documents Used by Subject Matter Panels	3
b. Field Review of Draft Standards.....	4
c. Adoption of Standards by the Commission	4
B. Alignment of Subject Matter Program Standards and Subject Matter Assessments	4
C. Single Subject Teaching Credentials.....	5
D. Contacting the Commission.....	5

Part 2: Standards of Quality and Effectiveness for the Subject Matter Program in Industrial and Technology Education

A. Overview and Introduction to the Handbook.....	6
1. Contributions of the Industrial and Technology Education Advisory Panel	6
2. Industrial and Technology Education and the Preparation of Technology Teachers: Introduction by the Advisory Panel.....	7
3. Definitions of Key Terms	8
B. The Industrial and Technology Education Standards	9
1. Preconditions for the Approval of Subject Matter Programs in Industrial and Technology Education	9
2. Standards of Quality and Effectiveness for the Subject Matter Program in Industrial and Technology Education.....	11

5. Transmittal Cover Sheet Template	32

Foreword

One of the purposes of education is to enable students to learn the important subjects of the school curriculum so they can further their professional goals and function effectively in work, society and family life. Each year in California, hundreds of students enroll in industrial and technology education classes with teachers who are certified by the Commission on Teacher Credentialing (CTC) to teach those classes in public schools. The extent to which students learn to engage in and utilize industrial and technology education depends substantially on the preparation of their teachers in industrial and technology education and the quality of the teaching of industrial and technology classes.

The Commission is the agency of California government that licenses teachers and other professionals who serve in the public schools. As the policymaking body that establishes and maintains standards for the education profession in the state, the Commission is concerned with the quality and effectiveness of the preparation of teachers and other school practitioners. On behalf of the education profession and the general public, the Commission has an important responsibility to establish and implement strong, effective standards of quality for the preparation and assessment of credential candidates.

California teacher candidates are required to demonstrate competence in the subject matter they will be authorized to teach. Candidates for the Single Subject Teaching Credential have two options available for satisfying this requirement: they can either complete a Commission-approved subject matter preparation program, or they can pass the appropriate Commission-adopted subject matter examination(s) (Education Code sections 44280 and 44310). Because they satisfy the same requirement, these two options are to be as aligned and congruent as possible.

However, the substance and relevance of the single subject matter program standards and the validity of examination specifications (i.e., subject matter requirements) is not permanent. The periodic reconsideration of subject matter program standards and the need for periodic examination validity studies are related directly to one of the Commission's fundamental missions: to provide a strong assurance that teaching credentials issued by the Commission are awarded to individuals who have the knowledge, skills, and abilities that are needed in order to succeed in public school teaching positions in California. Best professional practice related to the program standards and the legal defensibility of the examination specifications require that the standards and specifications be periodically reviewed and rewritten, as job requirements and expectations change over time (Education Code sections 44225i, j, 44257, and 44288).

In the mid-1990s, the Commission developed and adopted standards for single subject matter preparation programs and, at the same time, specifications for the single subject matter examinations. This work was based on the advice of subject matter advisory panels and data from validity studies, and resulted in program standards and examination specifications that were valid and closely aligned with each other. Those subject matter standards and specifications were adopted by the Commission in 1998 and are still in use today. They are now being replaced by the subject matter requirements and single subject matter standards adopted by the Commission in 2006, as presented in this handbook.

The Commission's responsibility for establishing high standards for teachers is based, in part, on three major pieces of legislation. In 1988, 1992 and 1998 the Legislature and the governor enacted legislation sponsored by the Commission that strengthened the professional role of the Commission and enhanced its authority to establish rigorous standards for the preparation and assessment of prospective teachers. These reform laws were Senate Bills 148 (Chapter 1355, Stats. 1988), 1422 (Chapter 1245, Stats. 1992) and 2042 (Chap. 548, Stats.1998). As a result, the Commission has taken on new responsibilities for establishing and maintaining rigorous levels of quality in teacher preparation and competency for beginning teachers. To implement these three statutes, the CTC has developed new standards, subject matter requirements and other policies collaboratively with representatives of postsecondary institutions, teachers and administrators in public schools, and statewide leaders involved in public education. This work was done in alignment with the State Board-adopted academic content standards and/or frameworks for K-12 students, and, as required by SB 2042 (Chap. 548, Stats.1998), the K-12 student academic content standards are reflected in the Commission's teacher preparation and subject matter preparation program standards.

The revision of Commission standards pursuant to SB 2042 (Chap. 548, Stats.1998) was undertaken in three phases. Single subject matter advisory panels were established to assist in this important work. The first two phases of single subject matter advisory panels addressed the content areas of English, mathematics, science, social science, art, music, languages other than English, and physical education. These panels completed their work over a two year period from 2001-2003. The third and final phase of single subject matter panels was accomplished in 2004, and addressed the subject areas of agriculture, business, health science, home economics, industrial and technology education, and languages other than English: American Sign Language. The new subject matter standards developed by all of the panels were grounded in and aligned with the academic content standards for California K-12 students.

Part 1: Introduction to Subject Matter Program Standards

A. The Commission's Responsibility for Program Standards

The Commission fulfills one of its responsibilities to the public and to the profession by developing, adopting and implementing standards of program quality and effectiveness. In the process of upholding high standards for the preparation of teachers, the Commission also respects the considered judgments of educational institutions and professional educators, and holds educators accountable for excellence. The premises and principles outlined below reflect the Commission's approach to fulfilling its responsibilities under the law. The Commission asked the single subject advisory panels to apply these general principles to the development of standards for single subject matter programs.

- 1) *The status of teacher preparation programs in colleges and universities should be determined on the basis of standards that relate to significant aspects of the quality of those programs.*
- 2) *There are many ways in which a teacher preparation program could be excellent.*
- 3) *The curriculum of teacher preparation plays a central role in a program's quality.*
- 4) *Teacher preparation programs should prepare candidates to teach the public school curriculum effectively.*
- 5) *In California's public schools, the student population is so diverse that the preparation of educators to teach culturally diverse students cannot be the exclusive responsibility of professional preparation programs in schools of education.*
- 6) *The curriculum of a teacher preparation program should be based on an explicit statement of purpose and philosophy. An excellent program also includes student services and policies such as advisement services and admission criteria.*
- 7) *The assessment of each student's attainments in a teacher preparation program is a significant responsibility of the institution that offers the program.*
- 8) *The Commission's standards of program quality allow quality to assume different forms in different environments.*
- 9) *The Commission's standards of program quality are roughly equivalent in breadth and importance.*
- 10) *Whether a particular program fulfills the Commission's standards is a judgment that is made by professionals who have been trained in interpreting the standards.*

1. Overview of Standards for Preliminary Teacher Preparation Programs

The standards reforms initiated by SB 2042 (Chap. 548, Stats. 1998) began with the simultaneous development of standards for preliminary teacher preparation programs and for teacher induction programs. The advisory panel appointed by the Commission that developed these two sets of standards was charged with developing the following three policy documents for review and consideration by the Commission:

- New standards of quality and effectiveness for preliminary teacher preparation programs;
- Teaching Performance Expectations that would serve as the basis for evaluating the competence of teacher candidates on teaching performance assessments embedded in preparation programs; and
- New standards of quality and effectiveness for professional teacher induction programs.

Following their adoption by the Commission in 2001, these three sets of standards initiated structural changes in the teacher credentialing system, as follows:

- alignment of all teacher preparation standards with the state-adopted academic content standards and performance levels for K-12 students, and with the *California Standards for the Teaching Profession (CSTP)*;
- inclusion of a teaching performance assessment in preliminary multiple and single subject teacher preparation programs; and
- a required induction period of support and formative assessment for all first and second year multiple and single subject teachers.

In addition to these structural and thematic shifts in the Commission's credentialing system and standards, SB 2042 (Chap. 548, Stats. 1998) replaced the Professional Clear Credential course requirements in health, mainstreaming and technology with a requirement that essential preparation in these three areas be addressed in both the preparation and the induction standards. Follow-up legislation in 1999, AB 1059 (Chap. 711, Stats. 1999) required that new standards for preparation and induction programs include preparation for all teachers to teach English learners in mainstream classrooms. The subject matter standards in this handbook have been designed to complement the SB 2042 standards for programs of pedagogical preparation.

2. Standards for Subject Matter Preparation Programs for Prospective Teachers

In California, subject matter preparation programs for prospective teachers are not the same as undergraduate degree programs. Postsecondary institutions govern academic programs that lead to the awarding of degrees, including baccalaureate degrees in Industrial and Technology, whereas the Commission sets standards for academic programs that lead to the issuance of credentials, including the Single Subject Teaching Credential in Industrial and Technology. An applicant for a teaching credential must have earned a Bachelor's degree from an accredited institution, but the degree may be in a subject other than the one to appear on the credential. Similarly, degree programs for undergraduate students in Industrial and Technology may or may not fulfill the Commission's standards for subject matter preparation. Single subject candidates who complete an approved subject matter program that satisfies the standards meet the subject matter requirement to qualify for the Single Subject Credential in Industrial and Technology.

3. The Standards Development Process

The Commission's process for standards development includes the establishment of advisory panels that develop and recommend program standards to the Commission. As this process was applied to the development of subject matter program standards, each panel consisted of:

- Classroom teachers of the subject area
- Subject area specialists in school districts, county offices of education, and postsecondary institutions
- Professors in the subject area teaching in subject matter preparation programs
- Teacher educators
- Members of relevant professional organizations
- Members of other relevant committees and advisory panels
- A liaison from the California Department of Education.

During the third phase of standards development, twelve panel members were appointed to the Agriculture Panel; twelve members were appointed to the Languages Other than English: American Sign Language Panel; eighteen members were appointed to the Business Panel; thirteen members were appointed to the Health Science Panel; fourteen members were appointed to the Home Economics Panel; and fourteen members were appointed to the Industrial and Technology Education Panel. These panels began their work in 2004 with a written charge that described their responsibilities for identifying the subject-specific knowledge, skills, and abilities (SMRs) which form the basis of the content required in Commission-approved subject matter preparation programs for teacher candidates. The SMRs for each of these content areas were approved by the Commission at its January 2005 meeting.

a. Essential Reference Documents for Subject Matter Panels

The subject matter panels used a number of documents as primary resource references for their work. The documents listed below were essential for the phase three panels' use in developing the draft program standards that were subsequently adopted by the Commission.

- The draft academic content standards for K-12 students and/or frameworks approved by the California State Board of Education (2005)
- The Commission-approved (1996) *Standards of Quality and Effectiveness for Subject Matter Programs in Agriculture, Languages Other Than English, Business, Health Science, Home Economics, and Industrial and Technology Education and Handbooks for Teacher Educators and Program Reviewers* in each of the academic areas (1999)
- The *Standards of Program Quality and Effectiveness for the Subject Matter Requirements for the Multiple Subject Teaching Credential* (Sept. 2001)
- The *Standards of Quality and Effectiveness for Preliminary Teacher Preparation Programs* (Sept. 2001, revised 2003)
- The national subject matter standards for agriculture, languages other than English: American Sign Language, business, health science, home economics, and industrial and technology education
- Other important state and national studies and publications relevant to the subject areas.

The State Board-adopted K-12 student academic content standards and/or frameworks were the central documents used by the panels. In 2002, the first phase of subject matter advisory panels had identified six standards contained within the 1992 standards documents that were common to all of the subject matter standards, and had added several additional standards based on the SB 2042 reform (Chap. 578, Stats. 1998). This process resulted in the development and approval by the Commission of ten standards “common to all” programs that were incorporated within the specific program standards for each of the single subject area standards developed in phase three. In 2010 the Standards Common to All were revised and replaced with two new Standards Common to All.

The *Subject Matter Requirements for the Multiple Subject Teaching Credential* was also an important document used by the panels. In some cases the multiple subject standards language and the organization of the standards were incorporated by the panels. The standards of the national professional organizations also served as a guide and provided a comprehensive perspective for panel members.

b. Field Review of Draft Standards

The single subject matter standards developed by the phase three advisory panels and subsequently adopted by the Commission were formatted to align with the SB 2042 teacher preparation. In this new format the broad conceptual standard is presented, followed by Program Guidance for the standard which further articulates the concepts contained within the standard.

Early in 2004 the Commission conducted a field review of the draft single subject matter standards. The draft standards were mailed to all deans of education, directors of teacher education programs, and single subject coordinators at all Commission-accredited four-year institutions in California; to learned societies and professional organizations; and to funded subject matter projects, teacher organizations, school districts, and county offices of education. The draft standards were sent as well to over one hundred selected K-12 public school teachers and college/university professors. The standards were also placed on the Commission's web site with instructions on how to download the standards, complete the field review survey, and return survey responses to the Commission.

Standards review surveys were returned to the Commission by February 2004. Commission staff tallied all responses and listed all comments on a master survey form for each subject matter area. Revisions made by the panels as a result of the field review included providing clarifications and examples, and reorganizing content. Elements that were consistent with the state's K-12 student academic content standards remained unchanged.

c. Adoption of Standards by the Commission

The revised subject matter standards for all of the phase three subject areas were adopted by the Commission at its meeting of September 2006.

B. Alignment of Subject Matter Program Standards and Subject Matter Assessments

The Teacher Preparation and Licensing Act of 1970 (Ryan Act) established the requirement that candidates for teaching credentials verify their knowledge of the subjects they intend to teach. Candidates for single subject teaching credentials may satisfy this subject matter requirement by completing approved single subject matter programs or by passing subject matter examinations that have been adopted by the Commission. Senate Bill 2042 (Chap. 548, Stats.1998) required that subject matter programs and examinations for prospective teachers be aligned with K-12 student standards and frameworks.

To achieve this alignment and congruence, the Commission asked the subject matter advisory panels to develop subject matter requirements (SMRs) that would be consistent in scope and content with the K-12 standards and frameworks. At the time the Commission adopted the phase three subject matter program standards in 2006, it also adopted the subject matter requirements appended to the standards document. College and university faculty and administrators are urged

to examine these SMRs as a source of information about essential content that should be included in subject matter preparation programs, as these represent the scope of content on which both the program standards and the subject matter examinations are based and to which the program standards and the examinations are aligned.

Early in 2004, the Commission began the process of developing assessments that were aligned with the K-12 requirements. These assessments are known as the “California Subject Examinations for Teachers (CSET),” and are administered by an external contractor under the Commission’s direction. In the six subject areas, multiple-choice and constructed-response test items were drafted, based on the subject matter requirements. The test items were reviewed by both the Bias Review Committee and the appropriate subject matter advisory panel and revised as necessary. The CSET examinations for the phase three subject areas of agriculture, business, health science, home economics, industrial and technology education, and languages other than English: American Sign Language were first administered in fall 2005, and these assessments replaced the SSAT and Praxis II examinations in these content areas.

C. Single Subject Teaching Credentials

The Single Subject Teaching Credential authorizes an individual to teach classes in that content area in departmentalized settings. The holders of these credentials may teach at any grade level, but the great majority of the classes in these subjects occurs in grades seven through twelve. The Commission asked the subject matter advisory panels to recommend new policies to ensure that future teachers are prepared to instruct in the subject areas most commonly taught in secondary public schools.

D. Contacting the Commission

The Commission periodically reviews and updates its policies, in part on the basis of responses from colleges, universities, school districts, county offices, professional organizations and individual professionals. The Commission welcomes all comments and questions about the standards and other policies in this handbook. For further information, please contact the Commission at the following address:

Commission on Teacher Credentialing
Professional Services Division
1900 Capitol Avenue
Sacramento, California 95814-4213

Part 2: Standards of Quality and Effectiveness for the Subject Matter Program in Industrial and Technology Education

A. Overview of the Industrial and Technology Education Standards Handbook

This section of the handbook is organized into three parts. Part 1 of the handbook provides the background and context for the industrial and technology education program standards. Part 2 of the handbook presents the twenty program standards as well as the subject matter requirements for industrial and technology education. Part 3 of the handbook provides information about implementation of the industrial and technology education program standards in California colleges and universities.

1. Contribution of the Industrial and Technology Education Subject Matter Advisory Panel

The Subject Matter Standards and Requirements in Agriculture are designed to provide a basis for instruction and assessment in the content preparation of teacher candidates in agriculture teacher preparation programs. The standards provide the general domains of content preparation, but institutions are encouraged to reference both these standards and the corresponding Subject Matter Requirements on which the standards are based, as provided in this handbook when developing program documents.

This edition of the handbook differs in content and organization from the previous edition. However, the panel incorporated appropriate elements of the previous edition into these new standards. The panel made extensive efforts to align these standards of content knowledge for teachers with California's curriculum requirements for agriculture instruction in grades K-12. The inclusion of both university and K-12 faculty on the panel provided assurance that both education sectors were represented and their needs and interests were addressed. The panel also included a review of the agriculture teacher preparation standards of other states in its deliberations. The panel wishes to thank the substantial number of agriculture education experts who contributed both directly and indirectly to the development of these standards.

Each standard is designed to be comprehensive enough to provide general direction for university programs of agriculture education, yet flexible enough to allow and encourage local enrichment. In many respects the standards are organized by domain, but programs are allowed, and even encouraged, to consider alternative options for organizing the curriculum. As long as all domains and required program elements are included, a program will be determined to have addressed the standards appropriately and may be approved by the Commission after review.

2. Industrial and Technology Education and the Preparation of Technology Teachers: Introduction by the Advisory Panel

Technology is a constantly evolving body of knowledge that deals with the technical way in which individuals change the world, using critical thinking skills, resources, and devices to solve problems. Research and development of technology outpace the ability of the average person to adopt and apply technological advances. Industrial and technology education (ITE), the study of technology, is concerned as a discipline with learning about technology in its broadest forms. According to the National Academy of Engineering (NAE), “Technology comprises...the process by which humans modify nature to meet their needs and wants.” (Pearson & Young, 2002). Technology is the practical application of knowledge to process natural resources. It is innovation and design, where science is inquiry and discovery.

The basis for the ITE subject matter requirements and standards is a core of study that establishes the “nature of technology.” This core is surrounded by the content areas of power and energy, information and communication, and project and product development. The common nature of these areas of technology allows prospective teachers to study any content area and understand the basic principles of the other technology content areas. Through thematic organization of the content, prospective teachers study the relationships and principles using different technologies. Further, each of the content areas overlaps with different industry sectors (i.e., engineering and design, building trades and construction, manufacturing and product development, energy and utilities, and transportation).

In addition, ITE is the application of many different academic disciplines including mathematics, science, social studies, language arts. The interrelation of these content areas creates a dynamic that demonstrates to students how the world works and how they can participate in it. Preparing future teachers who understand these relationships empowers them to teach the highly diverse areas of ITE. This “central core” structure also anticipates a rapidly changing world in which flexibility is the most critical attribute.

The ability to think creatively, solve problems, apply systems-oriented thinking and analysis, and use appropriate tools in the process represents a fundamental set of skills required of everyone today. An ITE continuum of well-planned, coordinated, articulated, integrated and sequential learning experiences will prepare students for successful transition to higher education, the workplace, and further success in the home and community while pursuing lifelong learning.

Industrial and Technology Education teacher preparation programs should provide prospective teachers with a foundation that facilitates learning and helps students achieve their potential in public school programs concerned with developing technological literacy. The Technology for All Americans Project defined *technological literacy* as “the ability to use, manage, assess, and understand technology” (2000, p. 9). Programs should expect candidates to acquire technical literacy as well as technological literacy. *Technical literacy* is defined as “technical proficiency

in a specific technological area.” Prospective teachers of ITE must be able to use technology skillfully but also understand the impact of its use in the world.

ITE preparation programs should provide opportunities for students to research and assess current and emerging technologies using leadership and team building skills. Programs should model the knowledge, capabilities, “ways of thinking and acting,” attitudes and ethics necessary for professional success. Programs must also provide teacher candidates with an understanding of professional organizations and their value in supporting industrial and technology educators. New teachers joining the professional field of Industrial Technology Education must understand the significance of their involvement and participation as leaders in technological literacy.

Our increasing dependency on technology requires that we strive to improve and increase our command of technology. People need more opportunities to develop a fundamental understanding of technology. It is incumbent upon public education to prepare students to be technologically informed, responsible and involved citizens. It is incumbent upon ITE programs to provide prospective teachers with a comprehensive knowledge of the nature of technology.

3. Definitions of Key Terms

California state law authorizes the California Commission on Teacher Credentialing to set standards and requirements for preparation programs (Education Code sections 44225a, i, j; 44310; and 44311). The following key terms are used in this handbook.

Preconditions

A precondition is a requirement for initial and continued program approval. Unlike standards, preconditions specify requirements for program compliance, not program quality. Commission staff determines whether a program complies with the adopted preconditions on the basis of a program document provided by the college or university. In the program review sequence, a program that meets all preconditions then undergoes a more intensive review to determine if the program's quality meets the Commission's standards.

Standards

Standards are statements of program quality adopted by the Commission on Teacher Credentialing to describe acceptable levels of quality in programs of subject matter study offered by regionally-accredited colleges and universities that award baccalaureate degrees. Each standard is elaborated by Program Guidance for that standard. Programs must meet all of the applicable standards for both initial and continuing approval of a subject matter program by the

Commission. The Commission determines whether a program satisfies a standard on the basis of an intensive review of all available information provided by the program sponsor related to the standard.

Program Guidance

Program guidance is provided for each standard to help institutions in developing programs that meet the standards, and are also used by program review panels in judging the quality of a program in relation to a given standard. Within the overall scope of a standard, Program Guidance identifies what the Commission believes are the important dimensions of program quality with respect to each standard. In determining whether a program fulfills a given standard, the review panel considers the information provided by the program in response to each statement of that standard. When the review panel finds that a program has met each standard, the program is then recommended to the Commission for approval.

B. The Industrial and Technology Education Standards

1. Preconditions for the Approval of Subject Matter Programs in Industrial and Technology Education

To be approved by the Commission, a Subject Matter Program in Industrial and Technology Education must comply with the following preconditions.

- (1) Each Program of Subject Matter Preparation for the Single Subject Teaching Credential in Industrial and Technology Education shall include (a) a minimum of 36 semester units (or 54 quarter units) of core coursework in industrial and technology education and related subjects that are commonly taught in departmentalized classes in California public schools, and (b) a minimum of 9 semester units (or 15 quarter units) of coursework that provides extended study of the subject. These two requirements are elaborated in Preconditions 2 and 3.
- (2) The core (breadth) of the program shall include coursework in (or directly related to) subjects that are commonly taught in departmentalized classes of industrial and technology education and related subjects in the California public schools, including foundations of the nature of technology and introductions to power and energy, information and communication, and project and product development. These subjects should be understood to also include building and construction, manufacturing, engineering and transportation as appropriate.
- (3) Extended studies in the program (breadth, depth, perspective, concentrations) shall be designed to supplement the core of the program as described in Standard 12.

In addition to describing how a program meets each standard of program quality in this handbook, the program document by an institution shall include the course titles, unit designations, catalog descriptions and syllabi of all courses in the program that are used to meet the standards. Program documents must include a matrix that identifies which courses meet which standards.

Institutions may determine whether the standards are addressed through one or more courses for each commonly taught subject or courses offering integrated study of these subjects. Institutions may also define the program in terms of required or elective coursework. However, elective options must all meet the standards. Coursework offered by any appropriate department(s) of a regionally accredited institution may satisfy the preconditions and standards in this handbook. Programs may use general education courses in meeting the standards.

2. Standards of Quality and Effectiveness for the Subject Matter Program in Industrial and Technology Education

a. Standards Common to All Single Subject Matter Preparation Programs

Standard 1: Program Design

Subject matter programs are based on an explicit statement expressing the purpose, design, and expected outcomes of the program. The program curriculum builds on the K-12 State-adopted academic content standards, with student outcomes and assessments aligned to the subject matter requirements. The program provides prospective teachers with conceptual knowledge of the subject matter, develops academic literacy and discipline-based fluency, addresses issues of equity and diversity, and exposes prospective teachers to a variety of learning experiences appropriate for the discipline.

Standard 2: Program Resources and Support

The program sponsor allocates resources to support effective program coordination, which includes advising students, facilitating collaboration among stakeholders, and overseeing program review. Ongoing review processes use assessments of the prospective teachers and a variety of data such as input from stakeholders and other appropriate measurements for review and evaluation of the subject matter program.

b. Industrial and Technology Education Program Standards

Standard 3: Core Studies (Breadth)

Core studies in the program will include the nature of technology and develop technological literacy including: problem solving, engineering, design, technological models and systems, workplace competencies, and their interaction. The program also provides foundations in power and energy, information and communication, and project and product development. The program course work emphasizes the appropriate integration of academics, requiring higher order thinking skills to solve problems in practical situations. The program addresses issues of safety, environmental concerns and societal impact. The program includes career and employability skills in industry and education that promote appropriate attitudes for occupational success (i.e., legal and ethical responsibility, accountability and adaptability, leadership and teamwork).

The following statements no longer require a direct response but should be used for guidance in responding to the standards directly. Each statement of the standard should be responded to instead, by providing a brief description, a few examples and evidence citations for how the program meets the standard. Please limit the total response to the standard to 1-2 pages.

- The program introduces candidates to the structures of K-12 career pathways (building trades and construction, energy and utilities, engineering, manufacturing and product development, transportation) in industrial and technology education.
- The program will provide a broad overview of career clusters, training options, work place dynamics, and employability skills (Secretary's Commission on Achieving Necessary Skills: SCANS).
- The program provides candidates with varied experiences in using the engineering design process and knowledge of the product life cycle and new and emerging technologies to arrive at solutions.
- The program will provide candidates with multiple and varied experiences in project and product development that focus on demonstration of innovation and design skills.
- Through project development the candidate will demonstrate their understanding of factors that influence design form and function.

- The program requires candidates to identify and apply correct health and safety procedures and regulations to insure safe and proper selection, uses, maintenance and repair of tools, equipment and systems.
- The program demonstrates how to assess safe and proper use of equipment in the laboratory environment.
- The program will provide experiences in planning, design, and management of safe laboratory facilities, including environmental concerns.
- Programs will require candidates to develop an understanding of the evolution of technology and the influence of industry and technology on history.
- Candidates will be required to identify and analyze the resources and controls needed to develop and understand how systems interact.
- Through project-based experiences, a candidate will demonstrate an understanding of project and product management.
- The course work in the program integrates other appropriate academic disciplines (e.g., mathematics, science, humanities) with Industrial and Technology Education and draws substantive connections for students.

Standard 4: Extended Studies

The program includes coursework to supplement the program core and further prepare prospective teachers in the range of subjects included in the state-adopted K-12 curriculum. Prospective teachers build upon foundational knowledge acquired in the program core by further work within or across the content domains. The program's design for extended studies provides prospective teachers with options, including both specialized and comprehensive preparation based on coherent patterns of coursework.

The following statements no longer require a direct response but should be used for guidance in responding to the standards directly. Each statement of the standard should be responded to instead, by providing a brief description, a few examples and evidence citations for how the program meets the standard. Please limit the total response to the standard to 1-2 pages.

- The program offers extended studies that ensure that prospective teachers deepen their knowledge within or across content domains.
- Extended study may be offered in any or all of the following patterns:
- A combination of related content areas across one or more of these three domains: power and energy, information and communication, and project and product development.
- Concentrations in one or more domains
- Concentration in any content area within a domain (e.g., transportation, aeronautics, automotive repair)
- The program provides advising for prospective teachers to select or develop a coherent pattern of extended study based on a well-defined goal (i.e., to meet requirements of the major; to complement or supplement studies in the program core; to pursue special professional interests, e.g., engineering technology, manufacturing, multi-media).

Standard 5: Power and Energy

The program of study will include the fundamental scientific concepts specific to power and energy with applications to mechanical, fluid, thermal, and electrical systems. The program incorporates relevant K-12 state curriculum standards into coursework and lab experiences. The program requires candidates to design, maintain and analyze a variety of power, energy, and transportation systems.

The following statements no longer require a direct response but should be used for guidance in responding to the standards directly. Each statement of the standard should be responded to instead, by providing a brief description, a few examples and evidence citations for how the program meets the standard. Please limit the total response to the standard to 1-2 pages.

- Coursework will teach candidates to utilize scientific principles of physics, chemistry and mathematics to solve problems and apply technological solutions to situations involving work, power, energy, and efficiency.
- The program will provide experiences in power generation, storage processes, systems management, and alternative sources.
- The program will provide instruction and experiences in power and energy safety, control, transmission, loads, and conversion systems.
- The program will deliver instruction in the design, development, and maintenance of transportation systems and infrastructures.
- The program will teach the appropriate selection and use of a variety of materials and renewable and non-renewable resources used in power and energy systems that consider environmental and consumer issues.
- Candidates will develop hands-on skills with a variety of current power and energy tools and equipment.

Standard 6: Information and Communication

The program will provide advanced course work in the fields related to information and communication technology. Course work will include information, design processes, systems, and resources. The program incorporates relevant K-12 state curriculum standards. Candidates demonstrate an understanding of the knowledge and skills needed to design, analyze, use, and maintain a variety of communication systems. Course work will provide technological content in conjunction with societal, ethical, moral and economic considerations.

The following statements no longer require a direct response but should be used for guidance in responding to the standards directly. Each statement of the standard should be responded to instead, by providing a brief description, a few examples and evidence citations for how the program meets the standard. Please limit the total response to the standard to 1-2 pages.

- The course work will enable the candidate to conceptualize, design, document, prototype and refine the design of products, projects and systems.
- The course work will enable the candidate to analyze, understand and apply knowledge of various ways of communicating (e.g., imaging technologies, graphics, telecommunications, broadcast, information and multimedia systems).
- Candidates will appropriately select and effectively use materials, tools, equipment in information and communication systems and subsystems.
- Candidates will be able to apply principles of security procedures to define physical and electronic security plans.

Standard 7: Project and Product Development

The program will prepare candidates to use project and product design processes appropriate to industrial and technology education. Candidates will incorporate engineering principles, manufacturing and construction processes, resources, statistical data, and quality assurances as they relate to the universal system model (input, processes, output, feedback). The program incorporates the relevant K-12 state curriculum standards. Candidates analyze ethical, moral, and environmental issues in project and product design.

The following statements no longer require a direct response but should be used for guidance in responding to the standards directly. Each statement of the standard should be responded to instead, by providing a brief description, a few examples and evidence citations for how the program meets the standard. Please limit the total response to the standard to 1-2 pages.

- The candidate is required to use engineering principles through project development, using a variety of academic concepts and technical procedures in a lab environment, to manufacture a product safely.
- Candidates will understand manual and automated manufacturing and construction processes by learning how to construct and/or maintain projects or products using plans and following regulatory codes and industry guidelines.
- Candidates will demonstrate an understanding of cost, estimation, supply chain and demand dynamics.
- Candidates will understand research and development concepts as they relate to operation management, including cost estimation, design prototyping, material selection, and timeline.
- Candidates will demonstrate knowledge and capabilities for safe and proper use of tools, equipment, and materials.
- Candidates will understand principles and procedures of product testing and design, customer feedback, industry standards (e.g., ANSI, ISO), total quality management (TQM), and change management (e.g., change orders, version control).

c. Subject Matter Requirements for Prospective Teachers of Industrial and Technology Education

(1.) Introduction

Subject matter requirements represent the body of knowledge, skills and abilities expected of teachers of Industrial and Technology Education in the public schools. The subject matter requirements form the basis for both program standards and examination specifications for Industrial and Technology Education.

(2.) Content Domains for Subject Matter Knowledge and Skills in Industrial and Technology Education

Domain 1. Nature of Technology

Candidates understand technology as a problem-solving process and know the history and evolution of technology. They understand that technology involves creativity and innovation and are able to use concepts from the core content areas of science, mathematics, social science, and language arts as well as other content areas commonly taught in California public schools to design solutions to problems. Candidates understand the social aspect of technology and analyze the positive and negative effects of technologies on society and the environment. They understand the skills, knowledge, attitudes, and commitment to lifelong learning necessary to develop technological literacy and apply this knowledge in a rapidly changing global environment.

1.1 Innovation and Design

- a. Demonstrate an understanding of the engineering design process (e.g., defining a problem, using research techniques, communicating solutions, analyzing and optimizing solutions).
- b. Understand the product life cycle (e.g., prototypes, transition to production, evaluating product success).
- c. Demonstrate an understanding of how to use technological processes and systems to arrive at solutions to real-world problems.
- d. Demonstrate an understanding of current technological methods and processes to meet the needs of new and emerging fields and technologies (e.g., robotics, artificial intelligence, biotechnology, nanotechnology).
- e. Demonstrate an understanding of factors that influence design form (e.g., color theory, layout, aesthetics, juxtaposition, dimension).
- f. Demonstrate an understanding of factors that influence design function (e.g., purpose, practicality, ergonomics, utility).

1.2 Careers and Employability Skills

- a. Demonstrate an understanding of industrial and technology career opportunities (including postsecondary opportunities) and career paths.
- b. Understand skills, knowledge, responsibilities, attitudes, and aptitudes associated with industrial and technology careers.
- c. Demonstrate an understanding of workplace dynamics and structures (e.g., teaming, development of interpersonal and leadership skills, human resource and human

efficiency development, Secretary's Commission on Achieving Necessary Skills [SCANS]).

1.3 Safety and the Environment

- a. Demonstrate an understanding of health and safety procedures needed for laboratory and workplace settings.
- b. Understand the safe and proper use and maintenance of tools and equipment.
- c. Demonstrate an understanding of safety regulations (e.g., OSHA regulations) and procedures (e.g., use of MSDS, handling of hazardous waste), including emergency procedures.
- d. Demonstrate an understanding of the safe design and management of laboratory facilities and planning of safe laboratory activities.
- e. Demonstrate an understanding of environmental issues (e.g., water pollution, air pollution, noise pollution, health hazards) associated with the development and use of technology and technological systems (i.e., power and energy, communication and information, manufacturing, and construction).
- f. Understand procedures and techniques for selecting, maintaining, and repairing technological systems to ensure a safe environment.

1.4 Society and Globalization

- a. Understand the history and evolution of technology.
- b. Identify and analyze the positive and negative influences of technology on communities and society (e.g., air pollution, land use, environmental impact).
- c. Analyze factors (e.g., cultural, economic) that influence innovation and the development of technology.
- d. Demonstrate an understanding of the relationship between technological literacy and technical skills.
- e. Demonstrate an understanding of legal and ethical issues related to technology (e.g., copyright, liability, intellectual property, patents).

1.5 Independent and Integrated System Model

- a. Demonstrate an understanding of systems and subsystems in terms of input, process, output, and feedback.
- b. Identify and analyze the resources needed to develop and support technological systems.
- c. Demonstrate an understanding of control systems and their use in technological systems.
- d. Demonstrate an understanding of project and product management.

1.6 Integration with Other Academic Disciplines

- a. Use appropriate mathematical concepts (e.g., algebra, trigonometry, statistics, geometry) to analyze data and solve problems.
- b. Use a variety of communication skills (e.g., technical writing, schematics, flowcharts, verbal communication) to convey information.
- c. Use appropriate scientific concepts (e.g., Newton's laws, ideal gas law, chemical reactions) to analyze and solve problems.

- d. Demonstrate an understanding of the interactions between technology and the humanities, culture, and political sciences.

Domain 2. Power and Energy

Candidates demonstrate an understanding of the fundamental scientific concepts of power and energy and how these concepts apply to mechanical, fluid, thermal, and electrical systems. Candidates understand the generation, transmission, storage, and control of power and energy and apply this knowledge to design, maintain, and analyze a variety of power and energy technologies, including transportation technologies.

2.1 Processes

- a. Demonstrate an understanding of power generation processes (e.g., geothermal, nuclear, solar, fossil fuel, fuel cell).
- b. Apply scientific principles of work, power, energy, and efficiency to analyze energy transformations.
- c. Demonstrate an understanding of processes for energy storage (e.g., dams, flywheels, batteries).
- d. Solve problems using mathematical concepts related to power and energy (e.g., Ohm's law, Pascal's law, moment of inertia, time, distance, velocity).
- e. Apply concepts of power and energy to analyze a variety of technological systems (e.g., mechanical, fluid, electrical, thermal).

2.2 Systems

- a. Understand safety principles, safety regulations, and safety engineering.
- b. Describe and analyze systems that convert energy from one form to another (e.g., engines, generators, actuators).
- c. Describe components and analyze characteristics of power control systems (e.g., brakes, valves, switches, circuit breakers).
- d. Understand power transmission systems (e.g., gears, cams, parallel and series circuits, pulleys, pumps).
- e. Demonstrate knowledge of the architecture and infrastructure associated with land, sea, aerospace, and intermodal transportation systems (e.g., rapid transit, shipping lanes, highways, locks, flight patterns).

2.3 Resources

- a. Demonstrate an understanding of renewable (e.g., solar, wind, biomass) and nonrenewable (e.g., fossil, nuclear, chemical) energy sources.
- b. Demonstrate an understanding of the uses and properties of materials (e.g., fuels, lubricants, conductors).
- c. Demonstrate an understanding of a variety of power and energy tools and equipment (e.g., multimeter, torque wrench, dynamometer).

Domain 3. Information and Communication

Candidates demonstrate an understanding of the knowledge and skills needed to design, analyze, use, and maintain a variety of communication systems. They demonstrate an understanding of how information systems encode, transmit, receive, decode, and store data. Candidates understand principles of graphic communication and use appropriate graphic tools to communicate visually. They apply knowledge of circuits and their components to electronic communication systems.

3.1 Design Processes

- a. Demonstrate an understanding of design documentation (e.g., blueprints, mock-ups, storyboards, schematics).
- b. Apply practical design concepts (i.e., form and function) to solve problems in communication.
- c. Understand computer design (e.g., hardware, software).
- d. Demonstrate an understanding of drawing and drafting principles (e.g., lettering, multiview drawing, dimensioning).

3.2 Systems

- a. Apply knowledge of imaging and image production (e.g., photographic, electronic, print).
- b. Analyze characteristics of telecommunication systems.
- c. Analyze characteristics of broadcast communication systems.
- d. Understand processes (e.g., preproduction, production, distribution) for developing multimedia systems.

3.3 Resources

- a. Demonstrate an understanding of the materials (e.g., media, electronic components), tools (e.g., test equipment, software, hand tools), and equipment (e.g., hardware, imaging equipment) used in information and communication systems.
- b. Understand strategies for the effective use of information resources (e.g., data banks, subject matter experts, search engines).
- c. Demonstrate an understanding of communication systems architecture and infrastructure (e.g., analog systems, digital systems, mainframes, client servers, network architecture).
- d. Understand criteria for the selection of appropriate materials, tools, and equipment used in information and communication systems.

3.4 Security and Privacy

- a. Understand physical security systems (e.g., locks, access control, motion detectors, surveillance, intrusion detection).
- b. Understand electronic security systems (e.g., access and permissions, passwords, user IDs, roles of administrators and end users, encryption).
- c. Demonstrate an understanding of principles related to security compliance procedures (e.g., personal responsibility, job function, need-to-know basis, ethical and legal).

Domain 4. Project and Product Development

Candidates demonstrate an understanding of product development and how to plan, manage, and produce manufacturing and construction systems. Candidates understand the resources and processes needed to safely use a variety of processes to design, produce, maintain, and evaluate products. Candidates demonstrate an understanding of the requirements and constraints in the engineering design process and the systems approach to manufacturing and construction enterprises. Candidates understand issues associated with quality management and quality control, including statistical tools.

4.1 Engineering Principles

- a. Understand the project and product design process (e.g., needs assessment, product analysis, prototyping, production design, design for manufacturing).
- b. Understand safety principles, safety regulations, and safety engineering.
- c. Understand a variety of mathematical concepts and applications (e.g., measurement, tolerance, financial calculations) for product development.
- d. Understand principles of data collection, communication, and analysis (e.g., sampling, graphical representations, statistical measures).

4.2 Manufacturing and Construction Processes

- a. Understand processes involved in manufacturing (e.g., casting, forming, shaping, finishing, assembling, packaging).
- b. Understand project (e.g., building trades, multimedia, transportation) construction processes.
- c. Understand manufacturing and construction codes, regulations, and industry guidelines (e.g., OSHA, zoning, building codes, Environmental Impact Reports).
- d. Understand the role of research and development in manufacturing and construction enterprises.
- e. Understand operations management (e.g., cost estimation, decision making, capacity planning).

4.3 Resources

- a. Demonstrate an understanding of the proper identification, selection, use, and maintenance of tools and equipment (e.g., hand tools, power tools, measurement instruments).
- b. Demonstrate an understanding of the identification, selection, and use of materials (e.g., wood, metals, plastics, composites, polymers).
- c. Demonstrate an understanding of the supply chain and its components (e.g., vendors, just-in-time).

4.4 Quality Assurance

- a. Understand principles and procedures of product testing (e.g., source, in-process, final inspection).
- b. Demonstrate an understanding of strategies for obtaining and responding to customer feedback.
- c. Demonstrate knowledge of the development and purpose of industry standards such as Institute of Electrical and Electronics Engineers (IEEE), International Organization

- for Standardization (ISO), and American National Standards Institute (ANSI).
- d. Understand the principles of total quality management (TQM).
 - e. Identify principles and strategies of change management (e.g., software version numbers, building codes, change orders).

(3.) Subject Matter Abilities Applicable to the Content Domains in Industrial and Technology Education

Candidates demonstrate an understanding of the nature of technology and of the core technological concepts that remain constant as technological progress accelerates. Candidates understand the design process as a problem-solving model and are able to use it to solve problems in industrial and technology education. They apply core academic knowledge of industrial and technology education, including science, mathematics, measurement, economics, and data analysis to investigate and design technological systems and processes. Candidates are able to effectively communicate designed solutions using a variety of technologies and propose strategies for implementing the solutions. They understand how to use the tools, machines, resources, and processes needed to turn ideas into workable solutions. In addition, candidates understand and apply safety rules and practices in the classroom, laboratory, and workplace.

Candidates have knowledge of historical events, current research, and recent developments in technology and industry. Candidates have knowledge of interactions between technology and society (cultural, social, economic, and environmental) in which technologies are used. They demonstrate an understanding of the importance of continued education (e.g., professional organizations, technical publications, industry, research and development) for staying current with technological innovations. They are able to work with industry representatives and community organizations to identify industry trends and job opportunities, employers' expectations, and the personal characteristics (e.g., appropriate work habits, social and communication skills) necessary for obtaining and maintaining employment in industry and technology. They demonstrate an understanding of career planning and development and student leadership opportunities, along with the skills and attitudes needed for developing successful careers in industry and technology. Candidates are aware of the characteristics, functions, and structures of student leadership organizations, clubs, and competitive groups (e.g., SkillsUSA®, Technology Student Association (TSA)) and the candidates' roles and responsibilities as advisors.

Part 3: Implementation of Standards of Quality and Effectiveness for Subject Matter Programs in Industrial and Technology Education

A. Standards Implementation Process

The 2006 *Standards of Quality and Effectiveness for Subject Matter Programs in Industrial and Technology Education* are part of a broad shift in Commission policies related to the preparation of professional teachers and other California educators resulting from the mandate of Senate Bill 2042 (Chap 548, Stats. 1998). This policy change insures high quality in educator preparation while at the same time providing for flexibility along with accountability for institutions that offer programs for prospective teachers. The success of this reform effort depends on the effective implementation of program quality standards for each credential.

1. Process for Cyclical Review and Improvement of Subject Matter Standards

The Commission will adhere to its established cycle of review and reconsideration of the *Standards of Quality and Effectiveness for Subject Matter Programs in Industrial and Technology Education* as well as in other subjects. The standards will be reviewed and reconsidered in relation to changes in academic disciplines, state-adopted K-12 student academic content standards, school curricula, and the backgrounds and needs of California K-12 students. Reviews of program standards will be based on the advice of subject matter teachers, college and university faculty, and curriculum specialists. All program documents will be reviewed by statewide teams of peer reviewers selected from among qualified K-12 and postsecondary professional educators. Prior to each review, the Commission will invite interested individuals and organizations to participate in the review process.

2. Process for Adoption and Implementation of Standards

Program sponsors have at least two years to transition from the current to the new subject matter program standards. Program documents should be submitted at the sponsor's earliest convenience to avoid a potential lapse in program approval status. Expiration dates of currently approved single subject matter programs are provided below. Each single subject matter program for single subject credentials must be submitted for review and approval in accordance with the new standards. No new programs written to the previous standards were allowed to be submitted to the Commission for approval following the September 2006 adoption of the new phase III standards.

Information about transition timelines for candidates, sunset and expiration dates for currently approved programs, and preconditions are provided by the Commission through Coded Correspondence to the field and by additional program transition documents as appropriate to the needs of the field. Program sponsors should check the Commission website (www.ctc.ca.gov) frequently for updates.

3. Transition and Implementation Timelines for Programs

a. Program Transition Timeline

By July 1, 2008, existing ("old") programs based on previous subject matter standards should be superseded by new Commission-approved programs that have met the new standards. Once a program based on the new standards receives Commission approval, all students not previously enrolled in the old program (i.e., all "new" students) should enroll in the new program. After

June 30, 2008, no “new” students should enroll in an “old” program, even if a new Commission-approved program in the subject is not available at that institution. Students who enrolled in an old program prior to July 1, 2008, may continue to complete the old program until July 1, 2012.

b. Program Implementation Timeline

- September 2006** Commission adoption of new subject matter program standards. No new subject matter programs in industrial and technology education will be accepted for review in relation to the Commission's previous set of standards.
- January 2007** The Commission initiates ongoing technical assistance for developing new subject matter programs to meet the new standards.
- March 2007** The Commission initiates ongoing training for Program Reviewers. Qualified subject matter experts are prepared to review programs in relation to the standards.
- March 2007** Review and approval of programs under the new standards begin.
- 2007-09** Institutions submit programs for review on an ongoing basis. Once a “new” program is approved, all students who were not previously enrolled in the “old” program (i.e., all new students) must enroll in the new program. Students may complete an old program if they enrolled in that program either (1) prior to the commencement of the new program at their campus, or (2) prior to July 1, 2008, whichever occurs first.
- July 1, 2008** “Old” programs that are based on the previous 1998 standards must be superseded by new programs that have obtained Commission approval. After June 30, 2008, no new students may enroll in an old program, even if a new program is not yet available at the institution.
- 2007-12** The Commission continues to review program applications submitted in response to the standards and preconditions provided in this handbook. Programs submitting an application for review should provide the Commission with two qualified nominees who can serve as reviewers of other institutions’ program applications in order to expedite the review process.
- July 1, 2012** This is the final date for candidates to complete subject matter preparation programs approved under the previous 1998 standards. To qualify for a credential based on an “old” program, students must have completed that program prior to either (1) the implementation of a new program with full or interim approval at their institution, or (2) July 1, 2012, whichever occurs first.

c. Implementation Timelines for Candidates

Based on the Commission's implementation plan, candidates for Single Subject Credentials in Industrial and Technology Education who do not plan to pass the subject matter examinations adopted by the Commission should enroll in subject matter programs that meet the Commission’s 2006 standards either (1) once a new program commences at their institution, or

(2) before July 1, 2008, whichever occurs first. After a new program begins at an institution, no students may enroll for the first time in an “old” program (i.e. one approved under the previous set of standards). Regardless of the date when new programs are implemented, no students should enter old programs after June 30, 2008.

Candidates who enrolled in programs approved on the basis of prior standards (“old” programs) may complete those programs provided that (1) they entered the old programs either before new programs were available at their institutions, or before July 1, 2008, and (2) they complete the old programs before July 1, 2012. Candidates who do not comply with these timelines may qualify for Single Subject Teaching Credentials by passing the subject matter examinations that have been adopted for that purpose by the Commission.

4. Technical Assistance for Program Sponsors

Commission staff offers technical assistance for developing new programs and documents upon request by the sponsor of a preparation program. Program sponsors who are writing to new standards are advised to schedule a technical assistance meeting with staff at the earliest possible time. Topics of information at technical assistance meetings include:

- Explanation of the implementation plan adopted by the Commission
- Description of the steps in program review and approval
- Review of program standards and preconditions, as well as examples of implementing the standards
- Opportunities to discuss subject-specific questions
- Guidance on appropriate responses to the standards and the necessary level of supporting documentation and evidence to be provided within the responses
- Format and organization of the program document

5. Process for Review and Approval of Program Documents Submitted to the Commission

A regionally accredited institution of postsecondary education that would like to offer (or continue to offer) a subject matter preparation program for the Single Subject Credential in Industrial and Technology Education may present a program application that responds to the preconditions and the standards provided in this handbook. The submission of programs for review and approval is voluntary for colleges and universities.

If an institution would like to offer two or more distinct programs of subject matter preparation in industrial and technology education with different emphases, a separate application may be forwarded to the Commission for each program. However, the Commission encourages institutions to coordinate its single subject programs that are within the same subject matter discipline in order to maximize resources.

Programs may be submitted after January 2007 on an ongoing basis. Review of subject matter program proposals began in March 2007 and continues on an ongoing basis.

a. Selection, Composition and Training of Program Document Review Panels

Review panel members are selected because of their subject matter expertise and their knowledge of curriculum and instruction in the public schools of California. Reviewers are

selected from institutions of higher education, school districts, county offices of education, organizations of subject matter experts, and statewide professional organizations. Because the review process consists of a professional peer review, the Commission needs those institutions seeking program review and approval to provide at least two qualified nominees to participate in the review process. Members of the Commission's former Single Subject Waiver Panels and Subject Matter Advisory Panels also may be selected to serve as program reviewers.

The Commission staff conducts training and calibration that all reviewers must attend. Training includes explanations of:

- the purpose and function of subject matter preparation programs
- the Commission's legal responsibilities in program review and approval
- the role of reviewers in making program determinations
- the role of the Commission's professional staff in assisting reviewers
- the analysis and discussion of each standard
- alternative ways in which a standard could be met
- the aspects of the review process
- how to provide responsive feedback for program revision

Reviewers are also provided with simulated practice and calibration exercises in preparation for their roles in reviewing programs.

b. Steps in the Review of Programs

The Commission is committed to conducting a program review process that is objective and comprehensive. The agency also seeks to be as helpful as possible to colleges and universities throughout the review process. Commission staff is available to consult with program sponsors during program document development.

The review process consists of two sequential steps, as outlined below. An institution responding to the Commission's standards will respond to the two sets of standards described earlier in this handbook, namely, the Preconditions and the Program Standards (including Common Standards and discipline-specific Program Standards).

Step One: Review of Preconditions. An institution's response to the preconditions is reviewed by the Commission's professional staff since the preconditions are based on Commission policies and do not involve issues of program quality. The Preconditions are reviewed upon receipt of the institution's formal document submission. Once the responses to the Preconditions are deemed to have met these standards, the program document's responses to the Program Standards are then referred to the expert reviewers.

Step Two: Review of Program Standards. Unlike the Preconditions, the Program Standards (i.e., Common Standards and discipline-specific Program Standards) address issues of program quality and effectiveness. The Commission's process, therefore, is to have each institution's response to the Program Standards reviewed by a small team of subject matter experts (i.e., peer review). Once the review team determines that a proposed program meets the Program Standards, Commission staff recommends the program for approval by the Commission at its next public meeting.

If an institution's response to either the Preconditions or the Program Standards is determined to not meet the standards, feedback is formally provided to the program sponsor with an explanation of the review findings that includes specific reasons for the determination that the program standards are not met. During this aspect of the review process, program sponsors can obtain further information and assistance from Commission staff.

The Commission intends the overall program review process to be as helpful as possible to colleges and universities. Because a large number of institutions prepare teachers in California, it is very helpful for program sponsors to first consult with the Commission's professional staff regarding program applications that are in preparation. During the Program Standards review process, however, program sponsors and/or their representatives should not contact members of a review team directly under any circumstances in order to preserve the objectivity and integrity of the review process. If during the review process a program sponsor needs additional information, the program sponsor or representative should inform the designated staff consultant. If the issue or question is not resolved in a timely manner, program sponsors may contact the Executive Director of the Commission. After considering the review feedback, the program sponsor may make appropriate changes to the program document and resubmit the program application to the designated Commission staff member for reconsideration by the review team.

If, however, feedback from the review process indicates that only minor or technical changes need to be made in a program application in order to meet the applicable standards, Commission staff rather than the peer review team will review the resubmitted document and, if the standards are determined to have been met, will submit the program application to the Commission for approval without further review by the peer review team.

Appeal of an Adverse Decision. An institution that would like to appeal a decision of the staff (regarding Preconditions) or the review team (regarding Program Standards) may do so by submitting the appeal to the Executive Director of the Commission. The institution should include the following information in the appeal:

- The original program document and the stated reasons of the Commission's staff or the review team for not recommending approval of the program.
- A specific response by the institution to the initial denial, including a copy of the resubmitted document (if it has been resubmitted).
- A rationale for the appeal by the institution.

The CTC Executive Director may deny the appeal, appoint an independent review panel, or present the appeal directly to the Commission for consideration.

B. Submission Guidelines for Single Subject Matter Program Documents

To facilitate the proposal review and approval process, Commission staff has developed the following instructions for program sponsors submitting documents for approval of Single Subject Matter Programs. It is essential that these instructions be followed accurately. Failure to comply with these procedures can result in a proposal being returned to the prospective program sponsor for reformatting and/or revision prior to being forwarded to program reviewers.

1. Transmittal Instructions

Sponsoring agencies are required to submit **one printed bound paper copy** of their proposal(s), to the following address:

California Commission on Teacher Credentialing
Professional Services Division: Single Subject Matter Programs
1900 Capitol Avenue
Sacramento, CA 95814

In addition, **one electronic copy of the proposal text** (including supporting evidence where possible) should be submitted in Microsoft Word, or a Microsoft Word compatible format. Some phases of the review process will involve secure web-based editing. To facilitate this process, please leave no spaces in the name of your document, and be sure that the name of the file ends in ".doc" (example: CTCdocument.doc).

2. Organization of Required Documents

Sponsoring agencies should include as the cover page of each copy of the program application the "Sponsoring Organization Transmittal Cover Sheet." A copy of the Transmittal Cover Sheet is located at the end of this section of the handbook for use by program sponsors. The proposal application documents should begin with Transmittal Cover Sheet that includes the original signatures of the program contacts and chief executive officer.

The program contact identified on the Transmittal Cover Sheet will be the individual who is informed electronically and by mail as changes occur, and to whom the review feedback will be sent. Program sponsors are strongly urged to consult the CTC web site, www.ctc.ca.gov, for updates relating to the implementation of new single subject matter standards and programs.

Each proposal must be organized in the following order:

- Transmittal Cover Sheet
- Table of Contents
- Responses to Preconditions, including course lists, units and catalog descriptions
- A matrix that addresses which courses address which subject matter requirements
- One to two pages of narrative response to each Standard

The response to the standards must:

- include evidence (i.e., syllabi, course materials, program data, etc.) supporting the responses to the standards. The evidence sections should be tabbed and labeled in order to assist the reviewers in finding the appropriate supporting documentation (e.g., course numbers, document names, etc.) The supporting evidence should also be tabbed, labeled and cross-referenced or electronically linked within the response.
- provide numbering on each page, preferably in the footer

3. Developing Responses to the Standards

a. Responses to the Standards Common To All.

The Commission adopted two standards that relate to program design and structure for programs in *all* single subject disciplines.

Standard 1	Program Design
Standard 2	Program Resources and Support

An institution's program application should include a subject-specific reply to each of these two Common Standards. Both of these standards require subject-specific program information in order to provide a complete picture to the reviewers.

b. Responses to the Program Standards

Program proposals should provide sufficient information about how the program intends to deliver content consistent with each standard so that a knowledgeable team of professionals can determine whether each standard has been met by the program. The goal in writing the response to any standard should be to describe the proposed program clearly enough for an outside reader to understand what a prospective teacher will experience, as he or she progresses through the program in terms of depth, breadth, and sequencing of instructional and field experiences, and what he or she will know and be able to do and demonstrate at the end of the program. Review teams will then be able to assess the responses for consistency with the standard, completeness of the response, and quality of the supporting evidence.

The written text should be organized in the same order as the standards. Responses should not merely reiterate the standard. They should describe how the standard will be met in the coursework content, requirements, and processes and by providing evidence from course syllabi or other course materials to support the explanation. ***Responses that do not completely address each standard will be considered incomplete and returned for revision.***

Lines of appropriate supporting evidence will vary with each standard. Some examples of supporting evidence helpful for review teams include:

- Charts and graphic organizers to illustrate program organization and design
- Course or module outlines or showing the sequence of course topics, classroom activities, materials and texts used, and out-of-class assignments
- Specific descriptions of assignments and other formative assessments that demonstrate how prospective teachers will reinforce and extend key concepts and/or demonstrate an ability or competence

- Documentation of materials to be used, including tables of contents of textbooks and identification of assignments from the texts, and citations for other reading assignments.
- Current catalog descriptions.

4. Packaging a Submission for Shipment to the Commission

Please **do not**:

- Use foam peanuts as packaging material
- Overstuff the binders. Use more binders if necessary. No binders larger than 3 inches will be accepted.
- Overstuff the boxes in which the binders are packed, as these may break open in shipment.
